Following occupational health legislation, the employer of workers remains responsible for communicating relevant use information to employees. When developing workplace instructions for employees, SUMI Sheets should always be considered in combination with the SDS and the label of the product. Derived No Effect Levels (DNEL) and Predicted No Effect Concentration (PNEC) values of substances derived from the Chemical Safety Assessment (CSA) will be given in section 8 of the SDS. The REACH registration numbers, where applicable, complete an extended product SDS.*

#### Operational conditions

<b>Maximum duration</b>	1 hour per day for delivery, storage, loading, cleaning and mixing operations. 4-8 hours per day for application.
<b>Frequency of exposure</b>	240 days per year.
<b>Physical state</b>	Aqueous solutions (aq).
<b>Process conditions</b>	Covers use at ambient temperatures. Provide a good standard of controlled ventilation (10 to 15 air changes per hour). <b>Additional information on product composition</b>
<p>In section 2 of the SDS as well as on the label, the classification of the mixture is provided.</p> <p>All ingredients contributing to the classification are stated in Section 3 of the SDS.</p> <p>Relevant limit values of ingredients on which the exposure assessment is based, are listed in section 8 of the SDS.</p> <p>The product may contain sensitizing ingredients that may cause allergic reaction to certain people.</p> <p>Section 2 of the SDS states these ingredients where applicable.</p> <p>Note that this will be usually the concentrate needed to create the working strength (WS) solution. In some cases the product will be RTU (Ready to Use) and will not require diluting. Hence there is a need to estimate the WS composition on a cases by case basis.</p> <p>Mixing aqueous solutions creates a slightly different risk management method than mixing powders as the latter is normally done by operators wearing respirators suitable for the particle size and hazard posed by the substance(s).</p>
